

GREEN FINANCING FRAMEWORK

January 2026

DISCLAIMER

This Green Financing Framework does not constitute or form part of, and should not be construed as, an offer or invitation to sell securities of **Bpifrance**, or the solicitation of an offer to subscribe for or purchase securities of **Bpifrance**, and nothing contained herein shall form the basis of or be relied on in connection with any contract or commitment whatsoever. Any decision to purchase any securities of **Bpifrance** should be made solely on the basis of the information to be contained in the base prospectus and relevant final terms produced in connection with the offering of such securities. Prospective investors are required to make their own independent investigations and appraisals of the business and financial condition of **Bpifrance** and the nature of the securities before taking any investment decision with respect to securities of **Bpifrance**.

Prospective investors are required to take into account the information contained in the base prospectus, the relevant final terms and this Green Financing Framework regarding the expected use of the notes proceeds, and must determine for themselves the pertinence of said information, as well as that of any element that the relevant investor estimates is necessary for the purpose of investing in green bonds and or green financing instruments.

No assurance can be given that eligible projects will meet investor expectations or requirements regarding such «green» or similar labels (including Regulation (EU) 2020/852 on the establishment of a framework to facilitate sustainable investment (the so called «**EU Taxonomy**»). Each prospective investor should have regard to the factors described in this Green Financing Framework and the relevant information contained in the base prospectus and seek advice from their independent financial adviser or other professional adviser regarding its purchase of the green bonds and or green financing instruments before deciding to invest. The **Bpifrance** Green Financing Framework may be subject to review and change and may be amended, updated, supplemented, replaced and/or withdrawn from time to time.

Moody's Rating has issued an independent opinion, dated December 2025, on the **Bpifrance's** Green Financing Framework (the «**Second Party Opinion**»). The Second Party Opinion is a statement of opinion on certain environmental and related considerations, not a statement of fact. No representation or assurance is given as to the suitability or reliability of the Second Party Opinion or any opinion or certification of any other third party made available. The Second Party Opinion and any other such opinion or certification is not intended to address any credit, market or other aspects of any investment in any note, including without limitation market price, marketability, investor preference or suitability of any security or any other factors that may affect the value of the notes. The Second Party Opinion and any other opinion or certification is not a recommendation to buy, sell or hold any such notes and is current only as of the date it was issued. The criteria and/or considerations that formed the basis of the Second Party Opinion and any other such opinion or certification may change at any time and the Second Party Opinion may be amended, updated, supplemented, replaced and/or withdrawn.

This material is not intended for distribution to, or use by, any person or entity in any jurisdiction or country where such distribution or use would be contrary to law or regulation. Persons into whose possession such documents may come must inform themselves about and observe any applicable restrictions on distribution.

The information and opinions contained in this Green Financing Framework are provided as at the date of this document only and are subject to change without notice. **Bpifrance** does not assume any responsibility or obligation to update, modify or amend the information or to otherwise notify any recipient if any information, opinion, projection, forecast or estimate set forth herein changes or subsequently becomes inaccurate. None of **Bpifrance** or its representatives and affiliates shall have any liability whatsoever in negligence or otherwise for any loss however arising from any use of this presentation or its contents or otherwise arising in connection with this presentation or any other information or material discussed.

Forward-looking statements:

This Green Financing Framework contains certain forward-looking statements that reflect **Bpifrance's** current views with respect to future events. These forward-looking statements are based on **Bpifrance's** current expectations and projections about future events. Because these forward-looking statements are subject to risks and uncertainties, actual future results or performance may differ materially from those expressed in or implied by these statements due to any number of different factors, many of which are beyond the ability of **Bpifrance** to control or estimate precisely. You are cautioned not to place undue reliance on the forward-looking statements contained herein, which are made only as of the date of this document. **Bpifrance** does not undertake any obligation to publicly release any updates or revisions to any forward-looking statements to reflect events or circumstances after the date of this document. The information contained in this Green Financing Framework does not purport to be comprehensive and has not been independently verified by any independent third party.

This Green Financing Framework is the exclusive intellectual property of **Bpifrance**.

INTRODUCTION

A brief overview of Bpifrance

Bpifrance acts as a Development Bank, Innovation Agency, Sovereign Wealth Fund, and Export Credit Agency. Its general interest mission leads **Bpifrance** to promote the financing and the development of companies operating in France, in particular SMEs. **Bpifrance** is a public group created by the law of 12 July 2013. It aims to finance and develop companies and acts in accordance with the public policies conducted by both the French State and French regional authorities. **Bpifrance** has a highly protected legal status and is closely supervised by the public authorities: the French State, through EPIC⁽¹⁾ **Bpifrance** (49.18 %) and the *Caisse des Dépôts* (49.18 %), owns and controls **Bpifrance**. **Bpifrance**'s "*raison d'être*" reflects the 2019 "loi PACTE" which encourages companies to "include social and environmental issues related to their activity in their articles of association".

Bpifrance, the parent and banking entity of the group, is the bond issuer. Its corporate purpose is to finance and stimulate French SME's growth and innovation, by offering financing solutions which are suited for every stage of businesses' development, such as:

- **Business loans (co-financing):** **Bpifrance** provides loans in partnership with commercial banks and financial institutions for businesses' investments and operations;
- **Guarantees:** **Bpifrance** shares the risk of transactions with banks and financial institutions;
- **Soft loans for innovation:** **Bpifrance** provides financial solutions and expertise to companies with innovative, technology-based, and business-focused projects.

Thanks to **Bpifrance**'s expertise, its 50 regional offices, and its 1,369⁽³⁾ employees who are in daily contact with French Micro and SMEs, these French corporates benefit from a unique and efficient assistance. Hence, **Bpifrance** helps them grasp opportunities while overcoming their challenges. **Bpifrance**'s business model is the one of an atypical organisation, built to answer French enterprises' sustainable growth needs. It has been constructed around the core and federative values to "Serving the Future".

⁽¹⁾ EPIC.

⁽²⁾ Commercial banks hold a 1.35% stake in **Bpifrance** and **Bpifrance** holds 0.29% of its own capital.

⁽³⁾ 1,369 employees are working at **Bpifrance** network, out of 4,513 employees in total, as of 31 December 2024.

Bpifrance global sustainable strategy

General and public interest

Since its foundation, **Bpifrance** has held the belief that finance should serve general and public interests. This belief was formalised by French parliamentarians at **Bpifrance's** creation in 2012, when its purpose and missions were defined with a focus on ESG issues.

Bpifrance's mission is also to develop and stimulate the French economy by financing the development and innovation of French Micro and SMEs (MSMEs). By supporting employment generation and preservation, by encouraging female entrepreneurship and by helping companies in disadvantaged areas, **Bpifrance is driven by economic, environmental, and social challenges.**

4 societal priorities – aligned with the UN's Sustainable Development Goals (SDGs) have been set by **Bpifrance** to constitute pivotal points of its commitments:

- Support employment and job creation
- Quality of Governance & Management
- Encouraging women's entrepreneurship
- Ecological and Energy transition

Each of **Bpifrance's** activities is aligned with at least one Sustainable Development Goal (SDG).

As such, **Bpifrance** aims to contribute in addressing the SDG challenges⁽⁴⁾ faced by the French State as identified in the Sustainable Development Report. Further, **Bpifrance** annually conducts an impact assessment, with a 3-year look-back period, to assess its direct economic, social and environmental impact.

A 360° view of Bpifrance Corporate Social Responsibility and ESG issues integration

As an investor: a responsible investor policy⁽⁵⁾ is applied to operations in all activities. **Bpifrance** systematically takes into account extra-financial ESG criteria which are likely to have an impact on investment decisions. ESG assessments are integrated throughout the life cycle of each investment. Furthermore, in the due diligence phase, investment teams use an ESG assessment tool to identify potential ESG issues. This tool has been developed to be sector and size sensitive. It allows **Bpifrance** investors to assess ESG issues' materiality related to the activity of the investee company. The ability of the investee company to face and respond to such issues is also taken into account. Additional due diligence could be conducted with the management to establish an improvement strategy, if needed, as stated in **Bpifrance** Responsible Shareholder Engagement policy.⁽⁶⁾

As a financier: **Bpifrance** conducts a 360-degree analysis of its customer's climate strategy. The Climate Maturity Index evaluates the exposure and maturity of companies in relation to the challenges of the green transition.

During the financing process, an interview is conducted with the counterparts to identify

⁽⁴⁾<https://dashboards.sdgindex.org/profiles/france>

⁽⁵⁾<https://www.bpifrance.fr/download/media-file/41977>

⁽⁶⁾<https://www.bpifrance.fr/download/media-file/73703>

the climate ambition of the company and the measures the client takes to reduce their environmental impact. This interview consists of a generic part and a specific part, which is tailored to the targeted sector of activity. It is intended to be repeated every two years to monitor the evolution of the funded company's climate strategy. The different steps include:

- (i) Interview and questionnaire between the account manager and the executive,
- (ii) Generation of a Climate Maturity Index assessment with strengths and improvements,
- (iii) Transition support by the account manager, and (iv) Ongoing customer dialogue with the **Bpifrance** ecosystem.

Climate Maturity Index assessments mainly lead to physical diagnostics with engineering firms that come to conduct physical measurements and initiate transformation of the company with the executives met.

The transition risk analyses have been reinforced for exposed sectors, including the transportation, real estate, construction and building sectors. Those sectors are monitored by internal expert groups to establish best-in-class procedures on evaluation and analysis before financing.

During the credit granting process, account managers conduct due diligence on the physical climate risks to which borrowing entities are exposed, using an internal tool called Climate Risk Management (CRM). The hazards analyzed include drought, shrink-swell behavior of clay soils, heatwaves, floods, and wildfires. These risks are assessed under three IPCC climate scenarios (RCP 2.6, 4.5, and 8.5) and across three-time horizons (short-term, medium-term, and long-term).

The CRM tool is designed to: (i) assess the levels of physical climate risks affecting the locations of a group or company, and (ii) carry out a complementary analysis in cases where high risk is identified for at least one hazard. This includes verifying the risk mitigation measures implemented by the group, company, or the municipality where the entity is located, covering financial, human, technical, and organizational aspects for companies, or administrative aspects for municipalities.

As an export credit insurer: environmental and social aspects are included in project analysis for **Bpifrance Assurance Export** guarantees over €10m or located in sensitive areas, following OECD's ESG due diligence recommendations⁽⁷⁾. Since January 2021, **Bpifrance** and the French State propose preferential export guarantee conditions to sustainable projects, in line with EU Taxonomy.

As an employer: the QLW⁽⁸⁾ agreement addresses work conditions, focusing on health, stress, psychosocial risks, harassment, and violence at work. Some specific health measures to protect employees undertaken in 2020 have been reconducted. A training course for new managers is set up to prevent psychosocial risks. **Bpifrance** has signed the Charter of Diversity, to fight all form of discrimination. A Gender Equality Agreement has been put in place. A new disability agreement was signed in 2020.

As a voice to foster ESG: **Bpifrance** is stepping up its CSR awareness-raising and training activities for businesses – in 2024 8,600 advice missions were conducted by **Bpifrance's** experts, and 1,031 new businesses were accelerated. **Bpifrance Université** offers 45 courses on CSR and more than 9,500 learners were on the online university platform in 2024. Many sector-specific guides have been developed to raise awareness about climate, risks and challenges of energy transition, opportunities, and solutions.

⁽⁷⁾<http://mneguidelines.oecd.org/OECD-Due-Diligence-Guidance-for-Responsible-Business-Conduct.pdf>

⁽⁸⁾ Quality of Life at Work.

Strong governance structure to meet ESG challenges

Governance bodies are determined by law:

- ✓ An Audit Committee, a Risk Committee, an Appointments Committee and a Compensation Committee.

Advisory committees have been set up for:

- ✓ Financing-Guarantees, Innovation, and Climate.
- ✓ A dedicated Climate and Environmental Risk Management Committee.

A double principle of competence and parity is applicable at board level and the French State and Caisse des Dépôts are represented on the Board of directors. To oversee **Bpifrance** Climate Plan, a Climate Committee has been incorporated to the governance bodies. To strengthen transparent body governance, regional guidance councils adapt **Bpifrance's** actions to local areas' specificities.

Moreover, part of the variable remuneration of **Bpifrance's** CEO is linked to sustainability criteria, including indicators related to the achievement of objectives in terms of climate strategy and the reduction of greenhouse gas (GHG) emissions.

Bpifrance's Environmental and Energy Transition challenges

In accordance with its constitutional documents established by the law of June 2005, **Bpifrance** is committed to "support the implementation of the ecological and energy transition"⁽⁹⁾. Therefore, **Bpifrance** is a long-standing player in the green transition financing sector in France, as demonstrated by the below initiatives:

- By signing:

- Paris Agreement⁽¹⁰⁾
- Montreal Protocol⁽¹¹⁾
- Santiago Principles⁽¹²⁾
- Poseidon Principles⁽¹³⁾
- Financial Institutions' Declaration of Intent on Energy Efficiency⁽¹⁴⁾
- United Nations' Principles for Responsible Investment⁽¹⁵⁾
- French Public Investor Charter for Climate⁽¹⁶⁾ in December 2017 with the Caisse des Dépôts, the Agence Française de Développement, the Fonds de Réserve pour les Retraites and the ERAFP
- French Public Investor Charter for SDG⁽¹⁷⁾
- France Invest's SISTA⁽¹⁸⁾ and Parité Charters⁽¹⁹⁾ to increase financing for women entrepreneurs
- Finance for Biodiversity⁽²⁰⁾

⁽²⁰⁾ <https://actinitiative.org/fr/act-in-france-soutien-financier/>

- By supporting and promoting:
 - ACT initiative (Assessing low Carbon Transition) from ADEME⁽²¹⁾
 - Carbon Disclosure Project
 - Planet Tech Care
- By becoming a member of:
 - One Planet Sovereign Wealth Fund
 - Carbon Disclosure Project
 - "Nature 2050" program operated by CDC Biodiversité, which finance projects of restoration of biodiversity
 - Club B4B+ (Business for Biodiversity Positive)
 - "Companies committed for Nature⁽²²⁾" lead by Biodiversity French Office
- By fostering Biodiversity:
 - Several training sessions are available at **Bpifrance Université** to help French companies find solutions to mobilize on this issue and on how to adapt their business model
 - By using GBS™, Global Biodiversity Score, developed by *CDC Biodiversité* to measure biodiversity footprint of **Bpifrance** listed companies' portfolio
 - By working with France Invest Sustainability Commission on an assessment methodology dedicated to SMEs biodiversity footprint
 - **Bpifrance** has developed a biodiversity roadmap which is currently being deployed on all activities
 - **Bpifrance** have 10 Biodiversity priorities resulting from the National Biodiversity Strategy 2030 which are incorporated into **Bpifrance's** Strategy Plan and divided into 3 pillars:
 - Communicate:
 - Improving internal knowledge on the links between biodiversity and **Bpifrance's** activities and portfolios
 - Raising awareness and training employees on biodiversity subjects
 - Promoting awareness and recognition of **Bpifrance's** actions
 - Strengthening the communication among managers
 - Support:
 - Providing our customers with tools to better understand biodiversity
 - Improving biodiversity risk management
 - Reducing the operational impact of internal operations
 - Help:
 - Offering our client support services that integrate biodiversity challenges
 - Offering a dedicated system for our investments and partner funds
 - Providing financial support for the protection and restoration of biodiversity

⁽²¹⁾ <https://actinitiative.org/act-in-france-soutien-financier/>

⁽²²⁾ <https://engagespourlanature.ofb.fr/>

- By excluding from financing and investing in controversial activities:

- Anti-personnel mines and cluster munition
- Chemical and biological weapons
- Nuclear weapons
- Tobacco
- Fossil fuels
- Speculation on food commodities
- Gambling
- Pornography

- By imposing restrictions on financing and investment in the fossil fuel sector:

- **Bpifrance** has committed, alongside the *Caisse des Dépôts* Group, to capping financing and investments in sectors exposed to fossil energies. As regards thermal coal, the Group has committed to achieving zero exposure to thermal coal for its investment and financing portfolios by 2030 in OECD countries, and by 2040 in the rest of the world. Thus, **Bpifrance** is removing from its investment and financing portfolios:

1. Since 2021, companies whose business is exposed at more than 5% of turnover to thermal coal;
2. Companies developing new coal-fired power stations (threshold 300MW of new capacity) or new mines and infrastructure dedicated to coal;
3. Mining companies whose annual thermal coal production volume exceeds 10Mt;
4. Energy suppliers whose electricity production capacity from coal exceeds 10GW

- As regards non-conventional energies, **Bpifrance** undertakes to attain, prior to 2050, zero exposure to non-conventional hydrocarbons and to regularly re-examine this exit date in order to bring it forward. It is removing from its investment portfolios and financing:

1. Companies⁽²³⁾ generating over 10% of their turnover from non-conventional hydrocarbons: oil sands, and Arctic or hydraulic fracturing resources, except when financing targets a project or subsidiary dedicated to renewable energies;
2. Direct financing of exploration infrastructure and projects dedicated to these non-conventional hydrocarbons.

- As regards the capping of conventional oil and gas, **Bpifrance** is excluding the following from its investment portfolios and direct financing:

1. The development of new oil or gas projects (upstream)⁽²⁴⁾;
2. Transport infrastructure associated with these new projects

As a reliable actor in the green transition and an engaged partner in the transformation the world needs, **Bpifrance** aims to improve itself by setting ambitious targets:

- GHG emissions from Scope 1 and Scope 2 should be reduced by 40% by 2030 vs. a 2022 baseline, as well as targets and schemes around 6 themes: energy, efficiency, waste management, mobility, IT, purchasing and events

⁽²³⁾ Excluding companies supplying products and services (so-called oil and gas-related companies) and excluding Green Bonds, Sustainable Bonds and Social Bonds, and excluding companies primarily focussing on the transportation, storage and distribution of gas in France and bordering countries whose activities are regulated obligating them to non-discrimination in access to their infrastructure. The CDC Group encourages the latter to do their utmost to limit exposure to non-conventional energies and requires them to publish the share of their activities resulting from these resources.

⁽²⁴⁾ New oil or gas projects is defined as projects to be launched related to extraction and production; with the exception of a company developing mine gas in France to reduce methane emissions.

- A Scope 3 reduction measure is underway⁽²⁵⁾ ; and some ESG risk analysis tools will be implemented to business processes to measure indirect impacts for financing and investment activities
- On an annual basis **Bpifrance** assesses and monitors a Transition Risk Quantification⁽²⁶⁾ for highly exposed sectors.

And by acting in line with its values:

- A Carbon Footprint measurement of **Bpifrance** funding portfolio is made annually, a measurement that has been made since 2020
- A waste management program is in place since 2019 in all **Bpifrance** locations
- **Bpifrance** headquarters are “Excellent – HQE Building”, as certified in 2014 and 2018
- **Bpifrance** Informatic Services department has put in place a roadmap and initiatives that saved 1.7 tonnes of CO₂ emissions in 2021
- **Bpifrance** has developed an inhouse Climate Risk measurement “Heat Map” for its financing and lending portfolios. Each area has a dynamic physical risk rating. A prospective vision on several horizons (2025,2030,2050,2100) is proposed to **Bpifrance** analysts
- Climate Risk have been taken into consideration in **Bpifrance** mapping of risks
- **Bpifrance**’s green thematic loans allocation: at the end of 2025, close to 10% of **Bpifrance**’s balance sheet is dedicated to green thematic loans⁽²⁷⁾.

Financing the green transition is core to **Bpifrance**’s climate strategy and will benefit the global community. To collectively match the Paris Agreement of a limitation of global warming to well below 2, preferably to 1.5°C, compared to pre-industrial levels, the world needs to drastically extend the deployment of Renewable Energy projects.

Bpifrance assumes its responsibility by being one of the main financiers of transition projects in France. Essential for preserving the planet, the green transition also offers immense opportunities for sustainable growth. To assist businesses, **Bpifrance** is amplifying its climate plan with €35 billion deployed by 2029, distributed across three axes:

- Decarbonizing emitting companies,
- Supporting the production of decarbonized energy,
- Scaling up green innovation and solution providers.

Bpifrance’s Climate Plan results and remaining objectives

Bpifrance launched its Climate Plan in 2020 to support the ecological and energy transition of the French economy. After an initial deployment of **€20 Bn between 2020 and 2024**, the institution is now scaling up its ambition with a **€35 Bn commitment by 2030**.

Results Achieved (2020–2024):

- **€20 Bn deployed** across three dimensions: renewable energy, decarbonization of emitting companies, and support for green innovation.
- **€4.5 Bn** committed to renewable energy projects, with 430 projects realized.
- **€1.8 Bn in green loans** disbursed to 1,600 SMEs.
- **€1.5 Bn** in loans for thermal renovation, financing over 2 million m² of green buildings.
- **€2.4 Bn raised** for ecological transition investment funds.
- **700 companies** supported through *Diag Décarbon’Action*.
- **1,250 companies** engaged in *Diag Éco-Flux*.

⁽²⁵⁾ The first Group carbon assessment was carried out in 2019 on scopes 1, 2 and 3 upstream, and evaluates the group’s emissions at 15,000teqCO₂, i.e., the annual footprint of approximately 1,500 French people. [Link here](#) is the CDC Transition Plan with financed emissions objectives.

⁽²⁶⁾ Transition Risk Quantification aims at assessing **Bpifrance**’ portfolio exposition and vulnerability to climate transition risk.

⁽²⁷⁾ Based on internal estimation and objective of future disbursement.

- **9,000 learners** trained via **Bpifrance Université's** ecological transition modules.
- **3,000 companies** joined *Le Coq Vert* community.

Bpifrance's Climate Plan is elaborated over the 2025-2030 period⁽²⁸⁾:

In response to the climate emergency, France is committed to a profound transformation of its economy. This priority is shared by **Bpifrance**, which is accelerating the deployment of its Climate Plan with enhanced objectives for ecological and energy transition by 2030.

Essential for preserving the planet, the ecological transition also offers immense opportunities for sustainable growth. To support businesses, **Bpifrance** is amplifying its climate plan with €35 billion deployed by 2030, distributed across three key areas:

Supporting the production of decarbonized energy: €11bn target by 2029

Access to decarbonized energy is crucial for the green transition, especially in the industrial sector. **Bpifrance** plans to provide €11 billion in funding to renewable energy projects by 2030, facilitating these projects through the issuance of green bonds. Support for independent developers and producers of renewable energy will involve the mobilization of **Bpifrance's** investment teams. The production of decarbonized energy will also rely on innovation, new energies, and the nuclear sector (hydrogen, batteries, small modular reactors, biomass, etc.). **Bpifrance** will also aim to facilitate access to decarbonized energy for companies, particularly in the industrial sector.

To ensure access to clean energy, **Bpifrance** will continue its historical support for renewable energy production. The bank aims to remain the leading financier of renewable energy projects in France, while expanding its reach to European and emerging markets. It will also facilitate long-term energy contracts for industrial consumers and diversify its financing tools.

Key actions:

- €11bn in financing for renewable energy projects by 2029.
- Deployment of the FIEE2 fund (€240m) to support equity investments in renewable energy developers.
- Support for Corporate Power Purchase Agreements (CPPAs) and long-term nuclear energy contracts for SMEs.
- Expansion of financing tools (e.g. revolving credit lines, bridge loans).
- Development of export financing for renewable energy projects.
- Promote export financing for renewable energy projects.

Decarbonizing emitting companies: €12bn target by 2029

As the Climate Bank, **Bpifrance** aims to support 20,000 companies in their green transition over five years through a massive door-to-door campaign. Decarbonizing the industrial sector will be a priority, with specific actions to reduce emissions by supporting SMEs electrifying their processes, improving their energy efficiency, eco-design, and circular economy.

Bpifrance will intensify its support to help SMEs and midcaps reduce their carbon footprint, particularly in the industrial sector. The bank will deploy diagnostics, advisory services, and dedicated financing to promote electrification, energy efficiency, and circular economy practices.

Key actions :

- **20,000 companies** to be supported in their green transition.
- **8,000 industrial decarbonization missions**, including *Diag Décarbon'Action* and *Diag Adaptation*.

⁽²⁸⁾For more information on **Bpifrance** Climate Plan: https://www.bpifrance.fr/sites/default/files/2025-01/Bpifrance_PLAN%20STRAT%202025-2029_110x177_112024_NUM_CL10.pdf

- **€200m/year** allocated to the *Prêt Industrie Verte*.
- Promotion of electrification and energy efficiency in industrial processes.
- **95% of industrial SMEs** in **Bpifrance's** Capital Development portfolio to be supported in their decarbonization.
- **€1bn** invested in CAPEX-heavy green projects and climate-focused private funds.

Scaling up green innovation and solution providers: €12bn target by 2029

The bank will support innovative companies with innovation grants and massive investments, with a particular focus on solutions for the green industry and promising technologies for decarbonization.

Bpifrance's Climate Plan is central to the green transition of French SMEs and mid-caps, aiming for a greener industry and decarbonized energy consumption.

Bpifrance positions itself as the bank of green solution providers, supporting the emergence and growth of Greentech companies. The bank will invest in disruptive technologies, support industrial scaling, and promote the export of French green innovations.

Key actions:

- €1.5bn in innovation aid dedicated to Greentech (30% of total innovation support).
- €1.7bn in direct investments in green solution providers via dedicated and generalist funds.
- Creation of a Green Tech Observatory to identify and scale promising technologies.
- Support for gigafactories (batteries, hydrogen, critical metals) and circular economy solutions.
- Expansion of export financing for French green technologies.

Rationale for Bpifrance Green Financing Framework

Bpifrance has been historically working on establishing and implementing frameworks linked to sustainable issues, allowing the structure to be successfully entrenched in the sustainable market as of today.

Bpifrance Green Financing Framework's 2nd update has been prompted by the emergence of new regulation, notably the EU Green Bond Standard⁽²⁹⁾. Given the current evolution in sustainable finance expectations, **Bpifrance** wishes to align its strategy with up-to-date regulation to position itself as a top player in the market.

Consequently, five eligible categories have been added, namely:

- Waste management project (hereafter the *"Eligible Waste Management Project loans"*)
- Clean transportation and equipment projects (hereafter the *"Eligible Transportation and Equipment Project loans"*)
- Green industry projects (hereafter the *"Eligible Green Industry Loans"*)
- Pure players (hereafter the *"Eligible loans directed to Pure Players"*)
- Protection of biodiversity (hereafter *"Eligible Biodiversity expenditures"*)

and are complementing the historical categories:

- *"Eligible Renewable Energy Loans"*
- *"Eligible Green Building Loans"*
- *"Eligible GreenTech Loans"*

⁽²⁹⁾ https://finance.ec.europa.eu/sustainable-finance/tools-and-standards/european-green-bond-standard-supporting-transition_en

These categories reflect **Bpifrance**'s long-term commitment to an environmental transition and aims at enhancing the readability and transparency it entails. As such, **Bpifrance**'s Green Financing Framework is fully consistent with the Group's strategy and has been established to support notably its transition plan and Climate Plan.

One of the conclusions of The Future of European Competitiveness⁽³⁰⁾'s Report is:

Europe must bring down high energy prices while continuing to decarbonise and shift to a circular economy

Bpifrance clearly position itself to provide tools to all-sized companies to reach this goal.

Based on European Commission studies, almost 60%⁽³¹⁾ of Europe's energy consumption came from imported resources in 2023. **Bpifrance** wants to foster national and international Renewable Energy champions that could reverse this trend.

In accordance with French Law *Loi de Transition Énergétique pour la croissance verte*⁽³²⁾ the proportion of French electricity consumption generated from Renewable Energy projects should reach 33% in 2030. As of 2023, Renewable Energies accounted for 22% of France's gross final energy consumption. At the European level, the 2030 target was revised upwards from 32% to 42.5% in the new Renewable Energy Directive, known as RED III, which came into force in November 2023. In this context, renewable energy financing is one of the priorities in **Bpifrance**'s Climate Plan. Indeed, to face climate change, France will have to engage in a fast and unprecedented change of its global energy mix, while increasing the electrification of fossil-fuel dependent sectors within a decarbonised electric grid. Such changes could only be achieved by increasing the French renewable energy capacity and by replacing the fossil fuel-based electricity generation.

According to the French *Ministère de la transition écologique et de la cohésion et des territoires*⁽³³⁾, the building sector accounted for 43% of energy consumption and nearly 23% of GHG emissions in France in 2022. Following the same logic, the European Commission estimates that the building sector is responsible for 40% of the total energy consumed (largest sector in Europe) and 36% of GHG emissions in the EU⁽³⁴⁾. The European Commission encourages the renovation of existing buildings to reduce both the energy emissions and costs for households, as well as to boost economic activity and job creation. The European Commission also underlines that new buildings will help to reach the objective of climate neutrality by 2050 by proposing that all newly constructed buildings should be carbon neutral by 2030.

As an accelerator of the ecological transition, **Bpifrance** is strongly involved in the financing of new commercial buildings construction and thermal renovation **Bpifrance** is also committed to energy efficiency through the *Diag Éco-Flux* (energy diagnostic to help companies to optimise their energy consumption) and *Diag Perf'Immo* (for the energy renovation of tertiary buildings). Following its involvement in the transition of new and existing buildings, **Bpifrance** integrates new commercial buildings as an eligible activity in its Green Financing Framework.

In the context of the requirement for ecological and energetic transition to decarbonise the French Economy, a large number of Greentech, innovative companies improving environmental impact, have emerged. The number of Greentech has significantly increased in France going from 800 in 2020 to 2,750 in 2023 and 2,900 in 2024. Supporting Greentech's creation and growth, constitutes one of the main objectives of **Bpifrance** Climate Plan through investments, innovation aids or loans granted to companies specialized in new energy, agriculture & food industry, environment, clean mobility, green building and construction of ecosystem. As **Bpifrance**'s Green Financing Framework has been established in concordance with Climate Plan, **Bpifrance** integrates Greentech loans as an eligible activity.

⁽³⁴⁾ https://ec.europa.eu/commission/presscorner/detail/en/ip_21_6683

Within the European Union, an average of 5 tonnes of waste is produced annually per person and only 38% of the waste is recycled (figures from 2025)⁽³⁵⁾. **Bpifrance**, as an important environmental and societal actor, aims to contribute in **improving the waste management ecosystem**, in line with the EU ambition of increasing recycling rates as described in the EU Green Deal and the EU Waste Framework Directive⁽³⁶⁾. As such, **Bpifrance's** wish to support the industry is reflected in this updated framework by the inclusion of the **Waste Management related Loans category**. With the inclusion of this category, **Bpifrance** strives to improve waste management and limit the share of unhandled waste which could potentially end up contaminating water sources and the environment.

Through this updated framework, **Bpifrance** also strengthen its capacity to **support the green transition** by contributing to the decarbonization of the transport sector. The inclusion of Transport and Equipment Loans as an eligible category, allows **Bpifrance** to increase its financing to support companies/projects that are part of an industry that accounts for nearly a quarter of Europe's greenhouse gases. **Bpifrance** sees it as a priority to support the sector, which is key to reach the climate neutrality target, decarbonize at a faster pace⁽³⁷⁾.

While **Bpifrance** aims at supporting the development of new tools in the green transition, **Bpifrance** also strives to support companies that already have reached an advanced environmental profile and derive a significant part of their revenue from **environmentally positive business activities – so called "Offreurs de Solutions"**. The "Loans directed to Pure Players" category allows **Bpifrance** to encourage organizations that are already at the environmental forefront to keep developing which ultimately contributes to the green transition.

The ecological and energy transition of industrial activities is a French priority for sustainable growth. It places environmental protection at the heart of development or creation projects for new activities, value, and jobs. **Bpifrance** recognizes the need to support the **industry's transition** and therefore includes eligible **green industry loans** in its Green Financing Framework. This choice should be seen in the context of the French law "Loi Industrie Verte" of October 2023 launched by the French Government. It aimed at accelerating the country's reindustrialization and making France the leader in green industry in Europe, **Bpifrance**, in partnership with the State, has wished to complete its climate offer by deploying a new scheme, the Green Industry Loan⁽³⁸⁾. The loans in his category also support the ideas that underly the EU Clean Industrial Deal⁽³⁹⁾ which aims to **decarbonize the European industrial landscape** and promote competitiveness through investments in, among other things, circular economy, innovative solutions and cleaner mobility.

In addition, The EU can proudly state that it contains the largest coordinated network of protected areas in the world with the Natura 2000 system, but still, around 81% of habitats within the Union are in poor status. To improve the situation, the European Commission has put the biodiversity at the heart of the EU Green deal with the **Biodiversity Strategy for 2030**⁽⁴⁰⁾. **Bpifrance** has already recognized the challenges related to biodiversity and have launched services aimed at supporting companies manage their biodiversity strategy, such as the *Diag Biodiversité* launched in 2025 as a collaboration between **Bpifrance** and the *Office Français de la Biodiversité* ("The French Biodiversity Agency")⁽⁴¹⁾. **Bpifrance** strives to continue its **contribution to biodiversity preservation** by including eligible biodiversity expenditures in this Green Financing Framework.

Bpifrance 3rd version of its Green Bond/Financing Framework seek to use the ICMA Green Bond Principles (June 2025).

For the sake of clarity, every Eligible Green Loans Category of this framework is aligned with the ICMA Green Bond Principles and some of the Eligible Green Loans Categories are fully aligned with the EU Taxonomy Regulation (Regulation (EU) 2020/852) The fully EU Taxonomy aligned categories will be defined and detailed in the 2.1 Use of Proceeds sections.

This Green Financing Framework will cover the issuance of Green Financing Instruments aligned with the ICMA Green Bond Principles.

In addition, Bpifrance has published an EU Green Bond Factsheet, allowing for the issuance of EU Green Bonds. This factsheet has received a positive pre-issuance review by an external reviewer as described in the EU GBS regulation. In case of an EU Green Bond Issuance, this will be reflected in the relevant issuance documentation. The factsheet is available [here](#).

Bpifrance considers this Green Financing Framework as an opportunity to further develop the sustainable finance market in France, especially for small and medium enterprises (SMEs). Providing such sustainable financings to these companies will broaden their tools to successfully overcome environmental challenges. **Bpifrance** aims to reinforce its commitment to sustainability as it believes that Green Bonds are key financial instruments to achieve a low carbon economy. While supporting the development of sustainable finance, this approach confirms **Bpifrance's** leadership and its commitment to play a leading role in the transition towards carbon neutrality.

02

BPIFRANCE
GREEN FINANCING
FRAMEWORK

Bpifrance's Green Financing Framework has been established to set out the principles applicable to the issuance of Green Financing Instruments by **Bpifrance**, which support the financing and/or refinancing of **Bpifrance's** existing and future Eligible Green Loans (as defined below) that may be provided by **Bpifrance** to assist French companies in achieving their environmental and energy transition.

Under this Green Financing Framework, **Bpifrance** can issue the following Green Financing Instruments:

- Standard Green Use of Proceeds Bonds representing unsecured debt obligations with full recourse to the issuer only.
- Other Green debt instruments including NEU MTN - Negotiable European Medium-Term Note or NEU CP - Negotiable EUropean Commercial Paper.

For the avoidance of doubt, **Bpifrance** will be the issuing entity of the Green Financing Instruments, as well as the originator and the manager of the loans financed or refinanced by such Green Financing Instruments. The Green Financing Instruments issued under this Green Financing Framework will be subject to **Bpifrance's** general policies in terms of financial and liquidity risk management.

Bpifrance's Green Financing Instruments aim at fostering a sustainable energy transition in line with its Climate Plan and contributing to the Sustainable Development Goals⁽⁴²⁾ (SDGs). This Green Financing Framework has been prepared in accordance with the ICMA Green Bond Principles 2025⁽⁴³⁾.

Following ICMA 2025 standards, **Bpifrance's** Green Financing Framework is structure around the following four pillars:

1. Use of Proceeds,
2. Process for Project Evaluation and Selection,
3. Management of Proceeds, and
4. Reporting.

Bpifrance also follows the key recommendation of the principles with regard to external review.

⁽⁴²⁾ Sustainable Development Goals, more information <https://sdgs.un.org/goals>

⁽⁴³⁾ Green Bond Principles 2025: <https://www.icmagroup.org/assets/documents/Sustainable-finance/2025-updates/Green-Bond-Principles-GBP-June-2025.pdf>

Use of Proceeds

The net proceeds of **Bpifrance**'s Green Financing Instruments will be used to finance and/or refinance, in whole or in part, new or existing medium and long-term loans to entities and/or projects located in France, aiming at financing:

- Solar and wind projects (hereafter the *"Eligible Renewable Energy Loans"*)
- Green buildings projects (hereafter the *"Eligible Green Buildings Loans"*),
- Green tech firms (hereafter the *"Eligible Greentech Loans"*)
- Waste management project (hereafter the *"Eligible Waste Management Project loans"*)
- Clean transportation and equipment projects (hereafter the *"Eligible Transportation and Equipment Project loans"*)
- Green industry projects (hereafter the *"Eligible Green Industry Loans"*)
- Pure players (hereafter the *"Eligible loans directed to Pure Players"*)
- Protection of biodiversity (hereafter *"Eligible Biodiversity expenditures"*)

That meet the Eligibility Criteria set out in the table below (hereafter the ***"Eligible Green Loans"***).

The eligibility criteria for eligible green loans have been established according to the following two modalities:

- the substantial contribution criteria to environmental objectives, defined in the delegated acts of the EU taxonomy, or
- the criteria specific to the **Bpifrance**, inspired by the best market practices for each sector, always aiming to ensure maximum environmental and social integrity

Furthermore, to enhance transparency, for the following eligible green category of loans, **Bpifrance** might have eligible assets fully aligned with one of the activity of the EU Taxonomy for the objective climate change mitigation i.e compliant with the Technical Screening Criteria (TSC) of the EU taxonomy, both the substantial contribution criteria and the «do no significant harm» criteria to other objectives, and the minimum safeguards defined in the delegated acts:

- Renewable energy loans
- Green building loans
- Clean Transportation loans
- Waste management loans

To provide transparency and readability and considering the large number of loans / projects under *"Eligible Green Loans Categories"*; an overarching view on projects of project is disclosed in **Bpifrance** Green Financing Framework.

The Eligible Green Loans, defined in the table below, are in line with **Bpifrance**'s Climate Plan and aim at contributing significantly to Climate Change Mitigation and GHG emissions reduction.

Bpifrance might also issue Green Financing Instruments with proceeds to be fully allocated to one specific Eligible Green Loans Category, thus promoting a dedicated theme. Such thematic instruments will be marketed as such before issuance and a sub-portfolio of Eligible Green Loans under the targeted category will be identified within the allocation reports.

ELIGIBLE GREEN CATEGORIES	DEFINITION	EU ENVIRONMENTAL OBJECTIVES	EU GREEN BOND ELIGIBILITY ⁽⁴⁴⁾	SUSTAINABLE DEVELOPMENT GOALS
"Eligible Renewable Energy Loans"				
Indicative mapping EU Taxonomy activities 4.1 Electricity generation using solar photovoltaic technology 4.3 Electricity generation from wind power	Loans for construction and/or operation of electricity generation facilities dedicated to onshore and offshore wind and solar power projects.⁽⁴⁵⁾ <u>Eligibility Criteria:</u> - The activity generates electricity from wind power, or - The activity generates electricity using solar PV technology.	Climate Change Mitigation		 
"Eligible Waste Management related Loans"				
EU Taxonomy activities 5.5 Collection and transport of non-hazardous waste in source segregated fractions	Loans or finance leases for the acquisition of vehicles and equipment intended for the collection and transport of non-hazardous waste sorted at source. <u>Eligibility Criteria:</u> - All separately collected and transported non-hazardous waste that is segregated at source and is intended for preparation for reuse or recycling operations and where the recipient of the loan is subject to French environmental laws. - Direct CO₂ emissions are zero.	Climate Change Mitigation		
2.7 Sorting and material recovery of non-hazardous waste	Loans to finance the construction, upgrade, and operation of facilities for the sorting or recovery of non-hazardous waste streams into high quality secondary raw materials using a mechanical transformation process. <u>Eligibility Criteria:</u> Loans dedicated to waste treatment or waste valorization, in line with environmental regulations, permits and licenses, health and safety standards when required.	Circular economy		
"Eligible Transportation and Equipment Loans"				
EU Taxonomy activities 6.3 Urban and suburban transport, road passenger transport 6.5 Transport by motorbikes, passenger cars and light commercial vehicles 6.6 Freight transport services by road	Loans or finance leases for the acquisition of: i) Coaches and buses (M2 and M3 vehicles) intended for passenger transport. <u>Eligibility Criteria:</u> - Direct CO₂ emissions are zero ii) Motorbikes, passenger cars and light commercial vehicles (L, M1 and N1 vehicles) intended for passenger transport. <u>Eligibility Criteria:</u> - Direct CO₂ emissions are zero iii) Light commercial vehicles and heavy-duty vehicles (N1, N2 and N3 vehicles) intended for freight transport. <u>Eligibility Criteria:</u> - Direct CO₂ emissions are zero - Not dedicated to the transport of fossil fuels	Climate Change Mitigation		  
EU Taxonomy activities Not applicable	Loans or finance leases for the acquisition of clean transportation and equipment <u>Eligibility Criteria:</u> - Electric or hybrid vehicles destined to passenger or freight transport - Electric or hybrid equipments	Climate Change Mitigation		

⁽⁴⁴⁾ For information purposes only, eligible green loans under this category or sub-category can be included in the EU Green Bond Factsheet if the project is fully aligned with the EU Taxonomy and follows the processes and regulations presented in the Appendix EU Taxonomy assessment methodology, published in Bpifrance's website.

⁽⁴⁵⁾ CSP technology will not be included in the Eligible Renewable Energy Loans category.

ELIGIBLE GREEN CATEGORIES	DEFINITION	EU ENVIRONMENTAL OBJECTIVES	EU GREEN BOND ELIGIBILITY ⁽⁴⁴⁾	SUSTAINABLE DEVELOPMENT GOALS
"Eligible Green Building Loans"				
EU Taxonomy activities 7.1 Construction of new buildings 7.2 Renovation of existing buildings 7.7 Acquisition and ownership of buildings	Loans to finance the construction of new non-residential buildings or the acquisition and ownership of buildings. <u>Eligibility Criteria:</u> - The non-residential buildings were built under the French Thermal Regulation 2012 (RT2012) which corresponds to the Nearly-Zero-Energy Building regulation applicable to non-residential buildings for which the building permit was submitted from 1 January 2013 ; - In France, the NZEB (Nearly Zero Energy Building) energy performance level corresponds to the regulatory performance level defined by RT2012 regulation.⁽⁴⁶⁾ Loans to finance non-residential buildings. <u>Eligibility Criteria:</u> - Non-residential buildings that have achieved or should soon achieve one of the following certifications: - HQE: [≥ "Excellent"]; - LEED: [≥ "Gold"]; - BREEAM: [≥ "Very Good"]; - BBC Effinergie+; - BBCA (Bâtiments Bas Carbone); - HPE [RT 2012 -10%]; - THPE [RT 2012 -20%]; - BePOS effinergie 2017 and BePOS+ effinergie 2017 ; - E+/C-;	Climate Change Mitigation		  
	Loans to finance the construction of new non-residential buildings. <u>Eligibility Criteria:</u> - The Primary Energy Demand (PED)⁽⁴⁷⁾, defining the energy performance of the building resulting from the construction, is at least 10% lower than the threshold set for the Nearly Zero-Energy Building (NZEB) requirement in France. - In France and for new buildings for which the building permit was submitted from 1 January 2022 and subject to the RE2020 regulation, compliance with the requirements of the RE2020 regulation automatically leads to compliance with the NZEB – 10% energy performance level⁽⁴⁸⁾. - For buildings larger than 5,000 m² ; - Demonstration that robust and traceable quality control processes were in place during the construction process ; - Life cycle Global Warming Potential (GWP) calculated for each stage in the life cycle and disclosed to investors and clients on demand. Loans to finance the renovation of existing buildings. <u>Eligibility Criteria:</u> - Improved energy efficiency from renovation(s) resulting in a reduction of primary energy demand (PED)⁽⁴⁹⁾ of at least 30%⁽⁵⁰⁾ within a maximum of 3 years in comparison to the energy performance of the building before the renovation(s). Alternatively, the building renovation complies with the applicable requirements for major renovations of the Energy Performance of Buildings Directive.			  
	Loans to finance the acquisition and ownership of buildings. <u>Eligibility Criteria:</u> - For buildings built before 31 December 2020 the building has at least an Energy Performance Certificate (class A). As an alternative, the building is within the top 15% of the national or regional building stock expressed as operational Primary Energy Demand. - For buildings built after 31 December 2020 the building meets the EU Taxonomy technical screening criteria⁽⁵¹⁾ applicable to the construction of new non-residential buildings and which are relevant at the time of the acquisition. - Where the building is a large non-residential building (with an effective rated output for heating systems, systems for combined space heating and ventilation, air-conditioning systems or systems for combined air-conditioning and ventilation of over 290 kW) it is efficiently operated through energy performance monitoring and assessment.⁽⁵²⁾			

⁽⁴⁶⁾ Interpretation of Delegated Regulation (EU) 2021/2139 of 4 June 2021 relating to the building sector: communication_taxonomy_buildings_vf-2.pdf (rt-batiment.fr)

⁽⁴⁷⁾ PED is expressed by a numeric indicator of total primary energy use in kWh/m² per year and based on the relevant national calculation methodology and as displayed on the Energy Performance Certificate (EPC)

⁽⁴⁸⁾ Interpretation from (UE) 2021/2139 of 4 June 2021 on buildings : https://rt-re-batiment.developpement-durable.gouv.fr/IMG/pdf/communication_taxonomy_batiments_vf-2.pdf

⁽⁴⁹⁾ PED is expressed by a numeric indicator of total primary energy use in kWh/m² per year and based on the relevant national calculation methodology and as displayed on the Energy Performance Certificate (EPC).

⁽⁵⁰⁾ The 30 % improvement results from an actual reduction in primary energy demand (where the reductions in net primary energy demand through renewable energy sources are not taken into account), and can be achieved through a succession of measures within a maximum of three year.

⁽⁵¹⁾ Section 7.1 of the Delegated Act Annex that are relevant at the time of the acquisition.

⁽⁵²⁾ In France, Building Automation & Control Systems decree has come into effect on July 22, 2020, in accordance with EU Energy Performance of Buildings Directive (EPBD).

ELIGIBLE GREEN CATEGORIES	DEFINITION	EU ENVIRONMENTAL OBJECTIVES	EU GREEN BOND ELIGIBILITY ⁽⁵⁴⁾	SUSTAINABLE DEVELOPMENT GOALS
"Eligible Greentech Loans"				
EU Taxonomy activities 3.1 Manufacture of renewable energy technologies 4.7 Electricity generation from renewable non-fossil gaseous and liquid fuels 4.14 Transmission and distribution networks for renewable and low-carbon gases 6.15 Infrastructure enabling low-carbon road transport and public transport 6.16 Infrastructure enabling low carbon water transport 7.5 Installation, maintenance and repair of instruments and devices for measuring, regulation and controlling energy performance of buildings	Loans to finance and support the emergence and growth of Greentech <u>Eligibility Criteria:</u> - These loans would be aligned with the internal Greentech definition⁽⁵³⁾ presented by Bpifrance. They are identified through Bpifrance process that includes 3 criteria: - Expertise of Bpifrance financing network based on internal green tech definition - Internal detection algorithm turning every month - External sources (Iceberg Tensoriel⁽⁵⁴⁾) - These loans aim to support an innovative solution to enhance markedly and directly environmental impact of the solution's user on at least one of the EU Environmental Objectives: - Climate change mitigation - Climate change adaptation - The sustainable use and protection of water and marine resources - The transition to a circular economy - Pollution prevention and control - The protection and restoration of biodiversity and ecosystems And provide an innovation solution on topics below: New energy: - assisting the research on hydrogen⁽⁵⁵⁾ - producing renewable energy⁽⁵⁶⁾ - generation of energy from small scale hydropower⁽⁵⁷⁾ - generation of energy from medium to large scale hydropower⁽⁵⁸⁾ - assisting firms specialized in methanation - installing and distributing smart grids⁽⁵⁹⁾ - enhancing renewable energy storage Green Industry: - financing the industrialization process of bio-based fertilizers - recycling materials⁽⁶⁰⁾ - financing waste management⁽⁶¹⁾ Agriculture and Food Industry: - biocontrol and green manure solutions - enhancing solutions for transformation and production for agriculture⁽⁶²⁾ Environmental Transition: - creating and supporting carbon capture solution⁽⁶³⁾ Clean Mobility: - Financing firms specialized in battery technology that allows improvements in the field of renewable energy storage - enhancing biofuel solutions⁽⁶⁴⁾ Green Building: - Financing firms specialized in developing technologies for smart buildings⁽⁶⁵⁾ - supporting waste management solution⁽⁶⁶⁾ on construction sites Protection of ecosystems: - marine ecosystem conservation - financing firms specialized in drinking water filtration/ purification solutions - soil remediation and improvement services - improvement of air pollution control technology By Bpifrance definition, a Greentech has the entirety of its operations in line with the eligibility criteria stated above.	Climate Change Mitigation Climate Change Adaptation Sustainable Use and Protection of water and marine resources Circular Economy Pollution Prevention & Control Biodiversity & Ecosystems		    

⁽⁵³⁾ **Bpifrance** has set up a Greentech definition: it is considered as an entity which can provide an innovative solution (by a service, a product, or a technology) who enhance or will enhance markedly and directly environmental impact of the solution's user on at least one of the EU Environmental Objectives. The targeted population could be a start-up where the company project is the development of a sustainable innovative and technological solution, or MSMEs which develop a Greentech solution to enhance impact on users. By **Bpifrance** definition, the Greentech is not involved in other activity different from the one related to the EU Environmental Objectives associated.

⁽⁵⁴⁾ Platform that gives access to real-time data, analytical tools, smart alerts and research reports on climate tech startups (<https://tensoriel.com/#products>)

⁽⁵⁵⁾ Only for external use, and exclusively sourced from renewable sources

⁽⁵⁶⁾ Solar, wind, geothermal, ocean sources, to be noted nuclear activities are excluded

⁽⁵⁷⁾ Less than 10MW.

⁽⁵⁸⁾ Strictly above 10MW and strictly below 1000MW.

⁽⁵⁹⁾ Sourced from renewable energy.

⁽⁶⁰⁾ Where final product is 100% based from recycled material

⁽⁶¹⁾ Reusable packaging solution

⁽⁶²⁾ For example: designing and installing equipment of different sizes to grow plants in hydroponics in a controlled environment

⁽⁶³⁾ CO₂ is permanently and safely stored and the carbon capture solution process is climate neutral (including the energy needed for the capture process)

⁽⁶⁴⁾ Only for road freight solution using hydrogen fuel cells

⁽⁶⁵⁾ For example: smart meters and building energy management systems

⁽⁶⁶⁾ Waste collection and depositing

ELIGIBLE GREEN CATEGORIES	DEFINITION	EU ENVIRONMENTAL OBJECTIVES	EU GREEN BOND ELIGIBILITY ⁽⁴⁴⁾	SUSTAINABLE DEVELOPMENT GOALS
«Eligible Loans directed to Pure Players»				
EU Taxonomy activities Not applicable	Loans to finance and support the Pure Players Entities on EET. <u>Eligibility Criteria:</u> Green “pure players” are entities that derive most of their revenue from environmentally positive activities; Those entities are defined by Bpifrance as «<i>Offreurs de Solutions</i>»: at least 80%⁽⁶⁷⁾ of company's turnover is generated by one or several economic activities directly linked to EU Environmental objectives. The activity is defined by a product, a service, a process which improve environmental impact of the company or the customer's.	Climate Change Mitigation Climate Change Adaptation Sustainable Use and Protection of water and marine resources Circular Economy Pollution Prevention & Control Biodiversity & Ecosystems		 
«Eligible Green Industry Loans»				
EU Taxonomy activities 6.5 Transport by motorbikes, passenger cars and light commercial vehicles 7.3 Installation, maintenance and repair of energy efficiency equipment 7.6 Installation, maintenance and repair of renewable energy technologies	Loans dedicated to Industrial entities. <u>Eligibility Criteria:</u> Loan purpose is to: - Optimize processes or improve performance (energy, water, materials) to better manage or reduce environmental impacts; - Promote «zero-carbon» mobility (with the same definition of the clean transportation activities presented above) for employees, goods, and products; - Innovate to bring products or services to market in the areas of environmental protection, circular economy, and/or enabling a reduction in resource consumption, renewable or non-renewable (energy, raw materials, water, etc.; including dedieselization, recyclability, reuse, etc.); - Promote a more sustainable energy mix by integrating more renewable energy sources (RES) (with the same definition of the renewable energy activities presented above).	Climate Change Mitigation Sustainable Use and Protection of water and marine resources Circular Economy Pollution Prevention & Control Biodiversity & Ecosystems		 
«Eligible Biodiversity-related expenditures» ⁽⁶⁸⁾				
EU Taxonomy activities Not applicable	Expenses dedicated to biodiversity-related activities. <u>Eligibility Criteria:</u> Operational expenditures dedicated to the <i>Diag Biodiversité</i> programs where Bpifrance expert visits the company on a 10-day program to raise awareness among internal teams about biodiversity. Bpifrance Experts conduct a biodiversity materiality analysis of the company's activity by identifying its main impacts, dependencies, risks, and opportunities. They identify, prioritize, and formalize action levers to enable the operational implementation of the company biodiversity approach.	Biodiversity & Ecosystems		 

⁽⁶⁷⁾ The remaining 20% of their revenue are in line with **Bpifrance** exclusion criteria.

⁽⁶⁸⁾ Eligible Biodiversity-related expenditures will only be allocated to short-term financing in this Framework (Green NEU-CP) see the appendix.

Substantial Contribution to Climate Change Mitigation (Article 10)⁽⁶⁹⁾: An economic activity shall qualify as contributing substantially to climate change mitigation where that activity contributes substantially to the stabilisation of greenhouse gas concentrations in the atmosphere at a level which prevents dangerous anthropogenic interference with the climate system consistent with the long-term temperature goal of the Paris Agreement through the avoidance or reduction of greenhouse gas emissions or the increase of greenhouse gas removals, including through process innovations or product innovations, by:

- (a) generating, transmitting, storing, distributing or using renewable energy in line with Directive (EU) 2018/2001, including through using innovative technology with a potential for significant future savings or through necessary reinforcement or extension of the grid;
- (b) improving energy efficiency, except for power generation activities as referred to in Article 19(3).

Bpifrance's Green financing instruments respect the EU Paris Aligned Benchmark (EU PAB) exclusions.⁽⁷⁰⁾

For the sake of clarity, the following sectors will not be financed and/or refinanced by the issuance of **Bpifrance's** Green Financing Instruments:

- Mining and quarrying⁽⁷¹⁾
- Distilling, rectifying and blending of spirits⁽⁷²⁾
- Manufacture of tobacco products⁽⁷³⁾
- Manufacture of gas; distribution of gaseous fuels through pipeline⁽⁷⁴⁾
- Wholesale on a fee or contract basis for agents involved in the sale of fuels, ores, metals and industrial chemicals⁽⁷⁵⁾
- Manufacture of coke and refined petroleum products⁽⁷⁶⁾
- Processing of nuclear fuel⁽⁷⁷⁾
- Manufacture of weapons and ammunition⁽⁷⁸⁾
- Manufacture of military fighting vehicles⁽⁷⁹⁾
- Gambling and betting activities⁽⁸⁰⁾
- Defence activities⁽⁸¹⁾

In accordance with **Bpifrance** legal practices, additional Eligible Green Loans will be incorporated into the **Bpifrance** base prospectus.

⁽⁶⁹⁾ Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020: <https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32020R0852&from=EN>
⁽⁷⁰⁾ In May 2024, the ESMA released guidelines on fund names, outlining specific requirements for using ESG or sustainability related terms in funds' names. In December 2024, the ESMA provided further clarification on the application of the guidelines for use of proceeds instruments. These guidelines apply to investors who may invest in **Bpifrance** financing instruments offering. Sector exclusions and the scope of the Framework ensure that all exclusions applicable to PABs are covered.

Process for Project Evaluation and Selection

Bpifrance has a strong expertise, as shown by its long-standing track record, in originating medium- and long-term loans focused on the renewable energy, green buildings, greentech, waste management,

The evaluation and selection of these loans are conducted with a focus to contribute to one or several of environmental objectives, in addition to the UN Sustainable Development Goals.

To do so, **Bpifrance**'s employees, must comply with:

- national and local regulations;
- professional rules; and
- **Bpifrance**'s policies and procedures.

All Eligible Green Loans will be submitted to **Bpifrance**'s regular underwriting process. As a credit establishment approved by the *Autorité de Contrôle Prudentiel et de Résolution (ACPR)*, **Bpifrance** is subjected to the provisions of the French *Code Monétaire et Financier* and the decree of 3 November 2014, relating to the internal control of banking sector companies, of the Consultative Committee on Legislation and Financial Regulation regarding internal control.

As such, **Bpifrance**'s credit risk policy is closely monitored and is established by its risk division. All financings are granted following a strict approval process through its support decision tool ("*Outil d'Aide à la Décision*") which:

- (i) centralises in a single tool the studies of all the financing projects submitted to **Bpifrance**;
- (ii) determines the risk profile of the credit files based on the project and the counterparty; and
- (iii) provides an audit trail of the decision-making process.

Decision-making powers within **Bpifrance** are organised in such a way that the riskiest and/or high-volume cases are submitted through the headquarter's decision process (i.e., reviewed by the risk division and for the most sensitive credit files, reviewed by **Bpifrance**'s Credit Committees).

Some dedicated measures are undertaken, depending on the projects:

"Eligible Renewable Energy Loans"

According to **Bpifrance**'s policies and procedures, Eligible Renewable Energy Loans are granted to be fully aligned with European taxonomy regulation and compliant with the Substantial Contribution Criteria (SCC), Do No Significant Harm (DNSH) criteria and Minimum Social Safeguards.

Eligible Renewable Energy Loans are disbursed only after a strict administrative process of several steps (a document of "Autorisation Unique" to comply with environmental and regulatory studies, a public consultation of the local community, a publication of prefectural decree and an appeal deadline having elapsed).

Bpifrance has set dedicated processes to assess wind and solar projects which include a strong ESG due diligences conducted on several types of risks. The SIEE team lead the risk assessments and, if necessary, may request additional information from project owners. The processes are detailed in **Bpifrance** Sectoral Policy available online⁽⁸²⁾.

⁽⁸²⁾<https://www.bpifrance.fr/download/media-file/84302>

“Eligible Green Building Loans”

Building financing is incorporated in **Bpifrance** Risk Policy. Evaluation and monitoring of buildings is key to ease the financing of assets in transition (construction or renovation); these two processes determine a transaction note which is incorporated into **Bpifrance** approval process established by its risk division.

A dedicated process for building evaluation and some methodological guides are available to **Bpifrance**'s experts which helps them to closely assess and monitor the value of the building, taking into account the environmental norms, the labels, the certifications and the renovation programs. An ESG grid assessment per building is under construction, the idea is to create a “Green Value” for the building.

The evaluation and selection of these loans go hand in hand with an expert note related to transition.

“Eligible Greentech Loans”

Bpifrance has set up a Greentech definition: it is considered as an entity which can provide an innovative solution (by a service, a product, or a technology) which enhances or will enhance markedly and directly environmental impact of the solution's user on at least one of the EU Environmental Objectives.

The borrower could be a start-up where the company project is the development of a sustainable innovative and technological solution, or MSMEs which develop a Greentech solution to enhance impact on users.

“Eligible Clean Transportation and Equipment Loans”

Bpifrance has set dedicated processes for the loan's selection. First, **Bpifrance** will ensure that all assets financed under this category are electric vehicles and equipment by select only assets flagged as “Electric” by the account managers. Moreover, during the credit granting process, account managers conduct due diligence on the physical climate risks to which borrowing entities are exposed, using an internal tool called Climate Risk Management (CRM). The hazards analyzed include: drought, shrink-swell behavior of clay soils, heatwaves, floods, and wildfires. These risks are assessed under three IPCC climate scenarios (RCP 2.6, 4.5, and 8.5) and across three time horizons (short-term, medium-term, and long-term). This process allows **Bpifrance** to rate borrowing entities from low to high risk depending on the results. Finally, **Bpifrance** will ensure that borrowers are subject to French environmental laws.

“Eligible Loans directed to Pure Players”

Bpifrance has set up an “*Offreurs de solutions*” definition: a company (i) whose turnover is predominantly (i.e., 50% or more) generated by one or more economic activities that contribute directly or indirectly to the EU environmental objectives and (ii) the activity is related to a product, service, or process that improves the environmental impact of businesses or end consumers.

“Eligible Green Industry Loans”

Each the Green Industry Loan is addressed to a SME or an industrial MidCap⁽⁸³⁾, and will be linked to a EET justification:

- Environmental Diagnostic such as Diag Action **Bpifrance**, Carbon Footprint, EET Action Plan, label, ISO standard, Decarbonization Accelerator, ADEME support to be provided by the borrowing company or another company in the Group.

In addition, **Bpifrance** has set-up a Green Financing Committee which is composed of members of the Finance Department, Accounting Department, Building, Equipment and Energy Financing Department, Studies Department, Evaluation Team, Risk Department, Compliance Department, Data & IA Department, and CSR Department. This committee will meet at least once a year, and is responsible for:

⁽⁸³⁾ Industrial Nace Code (from 10 to 33) or Industrial Service (from 49 to 52).

- Verifying the traceability of the Eligible Green Loans and their compliance with the Eligibility Criteria.
- Monitoring the satisfactory allocation of the net proceeds raised through **Bpifrance's** Green Financing Instruments issuance to the Eligible Green Loans Categories, as described in the «Use of Proceeds» section of this Green Financing Framework.
- Embedding the governance process to ensure systematic alignment of each “Eligible Renewable Energy Loans”, and the portion of “Eligible Green Building Loans”, “Eligible Clean Transportation Loans” and “Waste management Loans”, with the EU Taxonomy.⁽⁸⁴⁾
- To further ensure the respect of the minimum safeguards and DNSH criteria, review all Eligible Green Loans already allocated to verify that they are not facing major ESG controversy. The potential occurrence of such an ESG controversy can lead to the withdrawal of the project, temporary or definitive, from the list of Eligible Green Loans.
- In addition, the committee will be in charge of discussing and validating potential evolution of this Framework – to the extent possible – due to changes in corporate strategy, market and or regulatory developments.

This committee will follow a strict governance process to determine the EU Taxonomy alignment of “Eligible Renewable Energy Loans” and a portion of “Eligible Green Building Loans” and “Eligible Clean Transportation Loans” aligned with the EU Taxonomy:

- Prior to the occurrence of the Green Financing Committee, the Finance Department teams provide the Building and Energy Financing Department and the CSR Department with a documented list of new projects eligible to allocation in order to enable them to determine whether the new projects which are planned to be allocated satisfy the eligibility criteria for Eligible Green Loans Categories, and to verify the alignment of these projects with the EU Taxonomy.
- The Green Financing Committee makes the final decision on the allocation of assets earmarked to the bonds.
- This Committee also regularly reviews all assets already allocated to verify that they still comply with the criteria for Eligible Green Loans Categories and are not facing major controversy at this date.
- Non-compliance with an eligibility criterion for the Eligible Green Loans Categories leads to the temporary or permanent withdrawal of the project from the list of eligible assets.

As formalized in its ethic charter, all Eligible Green Loans financed by **Bpifrance** comply with applicable laws, including with applicable regulatory environmental and social requirements. In addition, **Bpifrance** respect all international conventions signed by France, encompassing human rights, workforce health and safety, labour standards (e.g. International Labour Organization convention).

For its financing division, which targets mainly entities and entrepreneurs located in France and under the French legislation system, **Bpifrance** relies primarily on the French regulatory framework in addition to internal CSR practices on ESG risks assessment described below. Indeed, France is a Designated Country under the Equator principles⁽⁸⁵⁾, which demonstrates the presence of environmental and social governance, legislation systems and institutional capacity designed to protect people and the natural environment.

These teams are also responsible for verifying that the projects under study have received all necessary environmental and social regulatory approvals as well as comply with applicable regulations. The minimum safeguards in the EU taxonomy require that eligible

⁽⁸⁴⁾On: substantial contribution to environmental objectives, do-no significant harm to environmental objectives, minimum safeguards and where developed meeting the technical screening criteria (TSC).

⁽⁸⁵⁾<https://equator-principles.com/about-the-equator-principles/designated-countries>

activities be conducted in accordance with key international standards of responsible business conduct.

Environmental issues are considered in the financing process. During the credit granting process, account managers conduct due diligence on the physical climate risks to which borrowing entities are exposed, using an internal tool called Climate Risk Management (CRM). The hazards analyzed include: drought, shrink-swell behavior of clay soils, heatwaves, floods, and wildfires. These risks are assessed under three IPCC climate scenarios (RCP 2.6, 4.5, and 8.5) and across three time horizons (short-term, medium-term, and long-term).

The CRM tool is designed to: (i) assess the levels of physical climate risks affecting the locations of a group or company, and (ii) carry out a complementary analysis in cases where high risk is identified for at least one hazard. This includes verifying the risk mitigation measures implemented by the group, company, or the municipality where the entity is located, covering financial, human, technical, and organizational aspects for companies, or administrative aspects for municipalities.

Moreover, **Bpifrance** conducts a 360-degree analysis of its customer's climate strategy. The Climate Maturity Index evaluates the exposure and maturity of companies in relation to the challenges of ecological transition. During the financing process, an interview is conducted with the counterparts to identify the climate ambition of the company and the measures it takes to reduce its environmental impact. This interview consists of a generic part and a specific part, which is tailored to the targeted industry. It is intended to be repeated every two years to monitor the evolution of the funded company's climate strategy. The different steps include: (i) Interview and questionnaire between the account manager and the executive, (ii) Generation of Climate Maturity Index assessment with strengths and improvements, (iii) Transition support by the account manager, (iv) Ongoing customer dialogue with the **Bpifrance** ecosystem.

Climate Maturity Index assessments mainly lead to physical diagnostics with engineering firms that come to conduct physical measurements and initiate transformation with the executives. Any new borrower has to prove to **Bpifrance** the processes in place to reduce company's impact. Technical solution on short and medium term has to be disclosed with a process optimization required, especially on Climate Change Adaptation. Furthermore, **Bpifrance** asks the borrower to formalize a change management policy and a detailed process of the actions listed. Remediation measures has to be set on counterparty side if any negative impact has been spotted.

Transition risk analysis has been reinforced for exposed sectors, including transportation, real estate, construction and building sectors. Those sectors are monitored by internal expert groups to establish best in class procedures on evaluation and analysis before financing.

Fiscal practices, such as respect for human rights, are examined as part of a normal financing review when these issues are relevant.

Additionally, **Bpifrance** relies on a strong governance structure with dedicated governance and advisory committees including a Climate and Environmental Risk Committee. To oversee the **Bpifrance** Climate Plan, a Climate Committee has also been incorporated to the governance. To strengthen transparent body governance, regional guidance councils adapt **Bpifrance's** actions to local areas' specificities.

No major negative environmental impact has been identified on any **Eligible Green Loans**, through **Bpifrance's** ESG risk processes. If any negative environmental impacts occurred, these will be reported in the Impact and Allocation Report.

Management of Proceeds

The proceeds of the Green Financing Instruments issued under this Framework will be managed by the Green Financing Committee in a portfolio approach. **Bpifrance's** treasury team will be responsible for the management of the net proceeds of Green Financing Instruments, to ensure that an amount equal to such proceeds is effectively invested in the financing and/or re-financing of Eligible Green Loans.

The net proceeds of the Green Financing Instruments will be deposited in **Bpifrance's** general account and an amount equal to the net proceeds will be earmarked for allocation to Eligible Green Loans (full allocation takes place each calendar year), in accordance with the principles outlined in this Green Financing Framework. The Eligible Green Loans will be consolidated in **Bpifrance's** balance sheet under the IFRS accounting standards. All relevant information regarding the issuance of **Bpifrance's** Green Financing Instruments will be monitored and kept into **Bpifrance's** internal accounting systems.

Dynamic portfolio approach

Bpifrance will strive to maintain in its portfolio a volume of Eligible Green Loans in excess of the volume of outstanding Green Financing Instruments at any time.

During the life of the Green Financing Instruments, Eligible Green Loans will be added to or removed from the Eligible Green Loans Portfolio to the extent required (e.g. in case of projects divestment or cancellation, in case of amortized or redeemed loans, or if a project ceases to meet the Eligible Green Loans Criteria). If the total volume of the eligible portfolio falls below the balance of the outstanding green instruments in circulation, **Bpifrance** commits to reaching an equivalent or higher level within 12 months.

Unallocated Proceeds

If any Unallocated Proceeds to Eligible Green Loans exist, they will be managed by **Bpifrance's** treasury team in compliance with the procedures and internal policies regarding liquidity management, to ensure that the funds are invested in liquid, short-term and certain investments, with a view to their future allocation. In any case, Unallocated Proceeds will be temporary. For the sake of clarity Unallocated Proceeds will not be invested in GHG intensive activities⁽⁸⁶⁾ or activities listed in the exclusion list stated in section 2.1 of this Green Financing Framework.

Bpifrance issues multiple series of Green Financing Instruments.

The internal methods for earmarking and allocating an amount equivalent to the net proceeds from the issuances of Green Financing Instruments will be reviewed by an external auditor.

Coupon and final redemption payments

Coupon payments and final redemption of **Bpifrance** Green Financing Instruments are not directly linked to any associated Eligible Green Loans, as the interest payments periods and maturities may not match. Thus, coupons and final redemption payments of Green Financing Instruments are paid out of **Bpifrance's** general liquidity pool at its sole discretion.

Increases and buy-backs

The principal amount of Green Financing Instruments can be increased and further Green Financing Instruments can be issued, as long as the net proceeds of the relevant issuances are used for financing and/or refinancing of Eligible Green Loans. Partial or whole buybacks of Green Financing Instruments are possible to support **Bpifrance's** funding programme. Buybacks can also be financed from **Bpifrance's** general liquidity.

⁽⁸⁶⁾ GHG intensive activities include Manufacture of gas; distribution of gaseous fuels through mains; Wholesale on a fee or contract basis for agents involved in the sale of fuels, ores, metals and industrial chemicals; Manufacture of coke and refined petroleum products; Processing of nuclear fuel.

This updated Framework applies to all future green bonds issued by **Bpifrance** after the publication date. Additionally, to enhance consistency and streamline our approach, the Framework introduces an evolved portfolio-based methodology for identifying eligible assets without a look-back period. This improved methodology will be applied uniformly across our existing bonds portfolio, ensuring all issued bonds benefit from our refined identification process.

Reporting

Bpifrance will publish an allocation and impact report on an annual basis, until maturity. This report will be published on **Bpifrance's** website at the occasion of the Annual Report's release. **Bpifrance** follows to the greatest extent possible to date, the recommendations of the ICMA Harmonised Framework for Impact Reporting⁽⁸⁷⁾ on sustainability reporting.

Allocation Report

The allocation report will include, but not be limited to, the following information:

- Financial information on **Bpifrance's** Green Financing Instruments (ISIN, currency, amount, etc);
- An overview of the portfolio of Eligible Green Loans, including a split between the different categories
- A breakdown of the portfolio of Eligible Green Loans at origination and its current balance:
 - By type of Eligible Green Loans
 - By type of assets/expenditures
 - By number of Loans
 - By sector of activity/industry classification
 - By maturity
 - By origination
 - By remaining term
 - By loan size
 - By region
 - By borrower activity
 - By borrower NACE Code
- The split of Eligible Green Loans aligned with the EU Taxonomy with the full criteria (TSC & MSS) and the percentage of eligible green loans aligned with the Substantial Contribution Criteria only
- The portion of new financing vs refinancing; and
- The balance of any unallocated proceeds (if any) and the type of temporary investments.
- A project-by-project information on amounts disbursed and their expected positive and negative environmental impacts, if any.

⁽⁸⁷⁾ Handbook Harmonised Framework for Impact Reporting June 2024: <https://www.icmagroup.org/assets/documents/Sustainable-finance/2024-updates/Handbook-Harmonised-Framework-for-Impact-Reporting-June-2024.pdf>

Impact Report

Annually, **Bpifrance** publishes an Impact Report aiming to provide transparent information on the environmental impacts of the allocated proceeds. **Bpifrance** reports, when feasible, relevant impact metrics which may include the following indicators:

Eligible Green Loans Categories	Output Indicators	Impact Indicator
Eligible Renewable Energy Loans	- Renewable Energy Capacity installed (MW) - Annual Energy Production (MWh)	- Estimated annual GHG emissions avoided/reduced (tCO₂e) - Project's locations - Nationality of Wind Turbine Constructor - Nationality of Solar Panels Constructor
Eligible Green Buildings Loans	- Number of buildings - Type, localisation and floor of buildings - Average energy consumption in kWh/m²/year	GHG emissions avoided relative to local baseline in tCO₂eq/year
Eligible Greentech Loans	- Number of projects (by geographical area) - Number of jobs supported - Split by EU Environmental Objectives	- Funding destined to Greentech R&D - Number of patterns
Eligible Waste Management related Loans	- Number of financed electric vehicles used for the collection and transport of waste - Number of recycling centres financed	GHG emissions avoided in tCO₂eq/year
Eligible Clean Transportation and Equipment Loans	- Number of loans by type of transport (activities) - Number of electric financed vehicles - Number of financed vehicles by type of vehicle	GHG emissions avoided in tCO₂eq/year
Eligible Loans directed to Pure Players	Number of pure players supported	Overview of environmental objectives promoted by Pure Players
Eligible Green Industry Loans	Number of companies receiving Green Industry loans	- Overview of environmental objectives - Type of transition labels applied
Eligible Biodiversity-related expenditures	Number of companies supported through the <i>Diag Biodiversité</i> programme	Number of people attained by biodiversity awareness-raising activities and trainings

Impact Reporting Methodology is published annually in the Impact Report, and if any change occurs in the methodology such changes will be clearly stated in the Impact Report⁽⁸⁸⁾.

In case of any material controversies related to an Eligible Green Loan, **Bpifrance** will provide investors with information on key issues at stake and actions put in place by **Bpifrance**.

⁽⁸⁸⁾ information on the methodology and assumptions to be used for the calculation of key impact metrics in accordance with delegated acts adopted under Articles 10(3), 11(3), 12(2), 13(2), 14(2) and 15(2) of Regulation (EU) 2020/852, and for any additional impact metrics.

External review

Second Party Opinion

Bpifrance has commissioned Moody's Rating to conduct an external review of this Green Financing Framework and to issue a Second-Party Opinion on the Green Financing Framework's environmental credentials and its alignment with the ICMA Green Bond Principles 2025.

In addition, **Bpifrance** also commissioned Moody's Rating to conduct a pre-issuance review of the European Green Bond Factsheet, available on **Bpifrance's** investors website page.

The Second-Party Opinion can be found on **Bpifrance's** website, as stated below.

External audit – post issuance

At the occasion of the audit of the annual accounts, **Bpifrance** will provide annually the assurance of an external third-party certifying a satisfactory allocation of the Use of Proceeds and the compliance of the allocation reporting with the Eligibility Criteria.

For the specific case of EU Green Bond, **Bpifrance** will follow the requirement of the EU Green Bond Standard regulation to review annually the report dedicated to EU Green Bonds.

Internal audit – post issuance

The report will be reviewed by **Bpifrance's** Permanent Control Department, which will be in charge to ensure the:

- Compliance of the projects with the framework ;
- Existence of an audit trail of the tables and graphic elements presented in the annual report ;
- Quality of data used in the audit trail ;
- Existence of first level controls over the portfolio of financed or refinanced Eligible Green Loans.

Documents and Websites

Bpifrance provides information regarding sustainable funding including:

- **Bpifrance** Green Financing Framework
- SPO on **Bpifrance** Green Financing Framework
- Debt Investor Presentation
- **Bpifrance** Green Financing Allocation & Impact Report
- External audit on **Bpifrance** Green Financing Allocation

On the following website: <https://www.bpifrance.fr/investor-relations>

The number '03' is rendered in a large, bold, dark brown font. A white, brush-stroke-like shape with a light blue gradient and a green circular dot at its tip extends from the right side of the '3'. The background is a solid yellow color with a subtle, light yellow brush-stroke-like shape behind the number.

03

APPENDICES

Appendix for the short-term financing in the form of Negotiable Debt Securities

Appendix for the short-term financing in the form of Negotiable Debt Securities

This framework document also allows for the issuance of short-term financing in the form of **Short-Term Negotiable Debt Securities, Negotiable European Commercial Paper (NEUCP) and medium-term financing in the form of Negotiable European Medium-Term Note (NEU MTN).**

In order to have a comprehensive approach to its sustainable financing strategy, **Bpifrance** decides to extend the types of financing covered by this framework document to short-term financing in the form of NEU CP and medium-term financing in the form of NEU MTN. Short-term and Medium-term financing is an enabling tool that can be issued to promote, support, or continue financing eligible green loans and green expenditures.

Use of Proceeds

Bpifrance commits to financing or refinancing eligible loans and OPEX aligned with eligibility criteria presented in part [2.1] of the Green Financing Framework document. Note that for the category protection of biodiversity, this category will only be allocated to NEU CP.

Process for Project Evaluation and Selection

The process for project evaluation and selection follow the commitments presented in part [2.3] of the Green Financing Framework document.

The entire amount raised at each NEUCP and NEUMTN issuance will be allocated to assets according to a portfolio approach with a specific approach for eligible Biodiversity-related expenditures. For clarification, **Bpifrance** has a single eligible portfolio for bonds and negotiable debt securities under the new Framework.

Bpifrance considers only assets aligned with this version of the Framework document as eligible for financing via NEUCP and or NEUMTN.

The Financial Direction's teams of **Bpifrance** are responsible for monitoring the active/passive portfolio for short-term and medium-term financing.

Management of Proceeds

Eligible Biodiversity-related expenditures, the expenditure identified will only be eligible for one year.

Bpifrance allows refinancing of eligible assets already financed via a bond that has matured, provided that the outstanding capital for loans are still on **Bpifrance's** balance sheet.

An annual review of the eligible pool will be conducted to ensure the management of funds allocated under short-term and medium-term financing. This review will ensure the available eligible amounts for short-term and medium-term financing and project annually the possibilities for short-term and medium-term financing against the available eligible amounts and the **Bpifrance's** bond issuance forecasts.

Since Green **NEUCP, Green NEUMTN** and Green Bonds may refer to the same eligible assets, **Bpifrance** may run the risk of finance the same asset, through its Green NEUCPs and NEUMTNs program and its Green Bond program. To prevent this from happening, a maximum issuance threshold of NEUCPs and NEUMTNs is set to ensure that at any given time the volume of year N Green Bonds issuances and year N outstanding Green NEUCPs and Green NEUMTN does not exceed the total amount of available eligible assets

The total amount of the eligible pool for the use of short-term and medium-term financing must always exceed the maximum amount of issued NEUCP and NEUMTN.

Allocation and Impact Reports

Bpifrance will integrate NEUCP and NEUMTN into the annual Allocation and Impact Report, dedicated section will be created to disclose the maximum amount issued in short-term and medium-term financing for the year. The allocation reporting will specifically present the volumes issued in NEUCP and NEUMTN. Information will be shared on the eligible portfolio financed.

Bpifrance will present to investors a clear distinction between the amounts issued and the financing allocated between short-term and medium-term financing and bonds.

External Review

Bpifrance follows the commitments presented in part [2.4] of the Framework document, thus **Bpifrance** has had this specific part related to short-term and medium-term financing verified by an external third party as part of its framework document update.

The regularity of eligible financing and allocation to short-term and medium-term financing will be controlled by the statutory auditor of **Bpifrance**, or any other ESG rating agency/SPO or auditor mandated by **Bpifrance**.

SERVING THE FUTURE

Bpifrance

27-31, avenue du Général Leclerc
